Security

■ Expected use

This manual describes decentralized input and output modules for connecting to an industrial network.

■ Installation and start-up

Precautions!

Installation and start-up may only be performed by trained personnel. A qualified individual is one who is familiar with the installation and operation of the product and has the necessary qualifications to perform such operations. Any damage caused by unauthorized operation or illegal and improper use is not covered by the manufacturer's warranty. The equipment operator is responsible for ensuring that appropriate safety and accident prevention regulations are observed.

■ Corrosion resistance

Precautions!

FNI modules generally have good chemical and oil resistance. When used in corrosive media (e.g. high concentrations of chemicals, oils, lubricants, coolants and other material media (i.e. very low water content), these media must be checked before the corresponding application material compatibility. If a module fails or is damaged due to this corrosive medium, a defect claim cannot be made.

■ Dangerous voltage

Precautions!

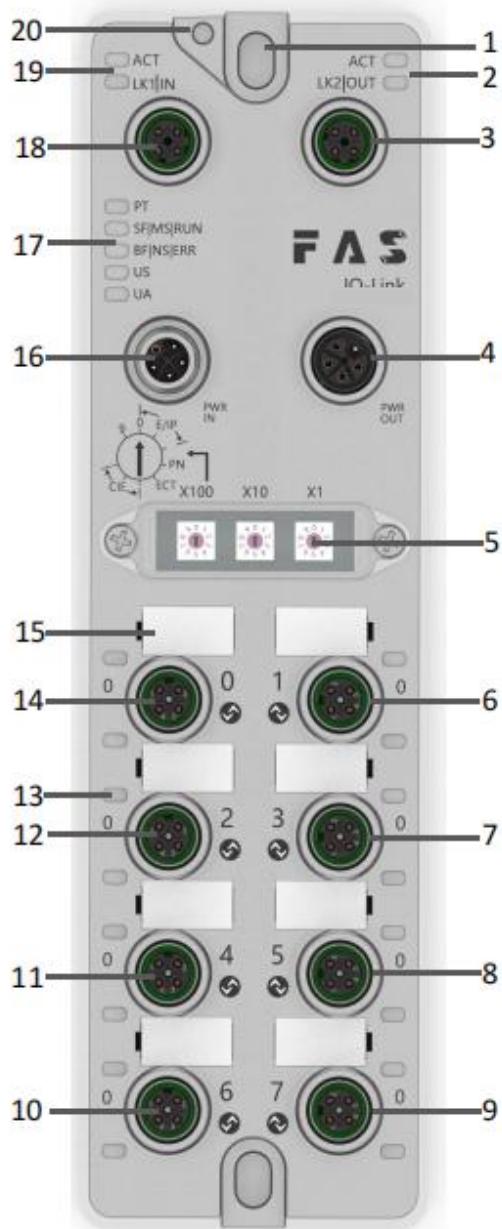

Disconnect all power before using the device!

■ General security

Debugging and inspection	Fault	Owner/operator obligations	Expected use
Before debugging, read the user manual carefully.	If the defect or equipment failure cannot be corrected, the operation of the equipment must be stopped to avoid damage that may be caused by unauthorized use.	This equipment is an EMC Class A compliant product. This device produces RF noise.	The warranty and limited liability statement provided by the manufacturer does not cover damage caused by: <ul style="list-style-type: none"> ·Unauthorized tampering ·Improper use operation ·The instructions provided in the user manual explain the use, installation and handling of discrepancies
This system cannot be used in an environment where the safety of personnel depends on the functionality of the equipment.	Only after the housing is fully installed can the intended use be assured.	<p>The owner/operator must take appropriate precautions to use this equipment.</p> <p>This device can only use the power supply that matches this device, and can only connect cables approved for application.</p>	

1.Getting Started Guide

1.1 Module overview

1 Mounting hole

2 Network port 2 status indicator

3 Network port 2

4 Power output port

5 DIP switch

6 Port 1

7 port 3

8 Port 5

9 Port 7

10 Port 6

11 Port 4

12 Port 2

13 Port status indicator

14 port 0

15 Port identification plate

16 Power input port

17 Module indicator light

18 Network port 1

19 Network port 1 status indicator

20 Ground connection

1.2 Mechanical connection

The modules are connected using 2 M6 bolts and 2 washers.
Isolation pads are available as accessories.

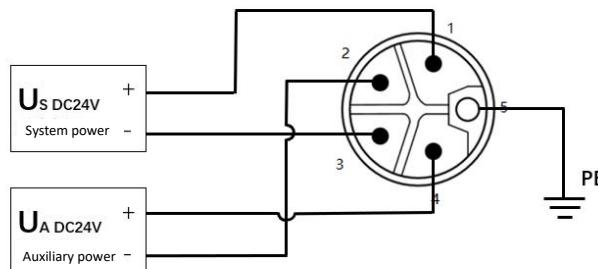

1.3 Electrical connection

1.3.1 Power interface L-code)

Definition of power input port Definition of power output port

Power port

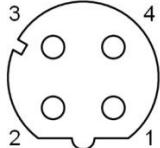

Pin	Function	Description
1	Us+	+24V(Brown)
2	Ua-*	0V(White)
3	Us-	0V(Blue)
4	Ua+*	+24V(Black)
FE	Functional ground*	FE (Yellow green)

Note:

1. It is recommended to provide sensor/module power supply and actuator power supply separately.
Total current <16A, even if the actuator power supply is daisy chained, the total current of all modules is <16A.
2. The FE connection from the housing to the machine must be low impedance and kept as short as possible.

1.3.2 Network interface (D-code)

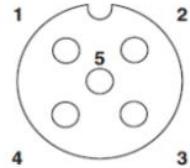

Pin	Function	
1	Tx+	Send data+
2	Rx+	Receive data+
3	Tx-	send data-
4	Rx-	Receive data-

Note:

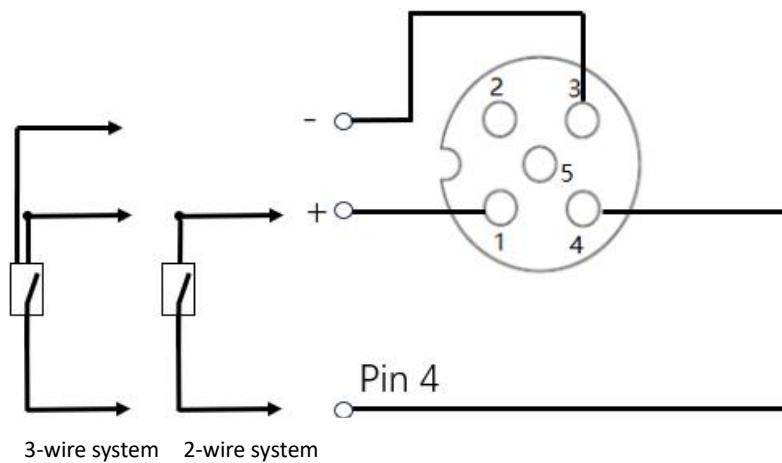

Unused I/O port sockets must be covered with end caps to meet IP67 protection rating.

1.3.3 I/O-port (A-code)

Pin	Function
1	+24V (Brown) maximum current 1A
2	Auxiliary power supply + (White)
3	0V(Blue)
4	Input/IOLINK (Black)
5	Auxiliary power supply-

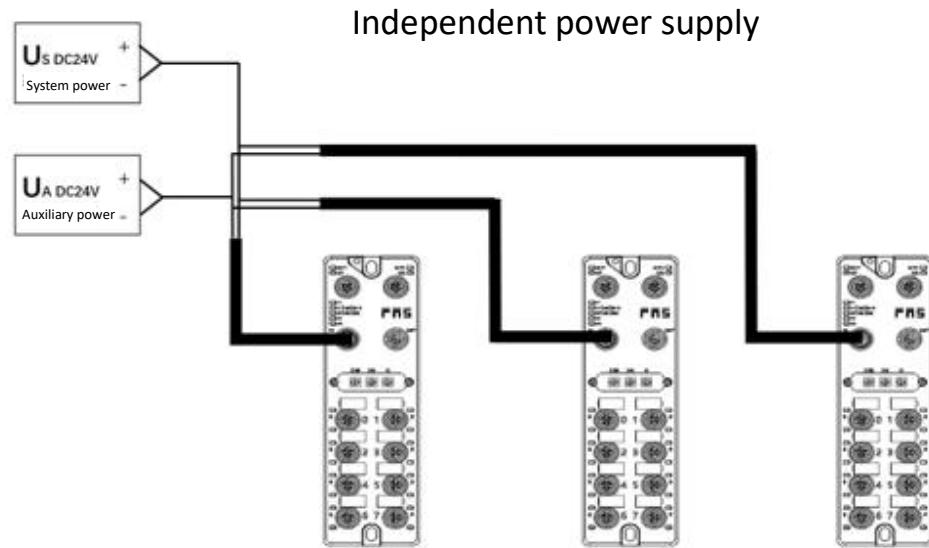

PNP input

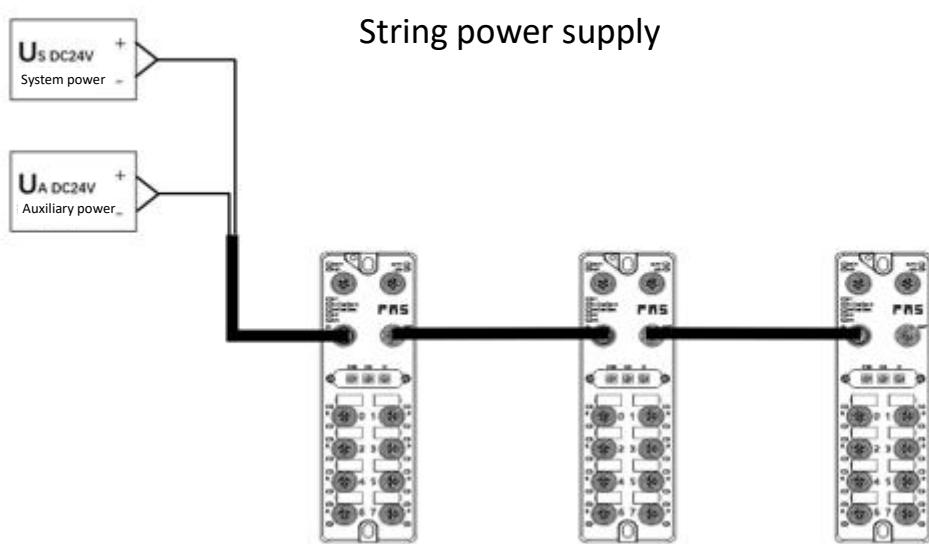

Note:

1. For digital sensor input, please follow the input guidance of EN61131-2, Type 2.
2. The maximum output current of each port is 2A. The total module current is 16A.
3. Unused I/O port sockets must be covered with end caps to meet IP67 protection level.

1.3.4 Master module wiring method

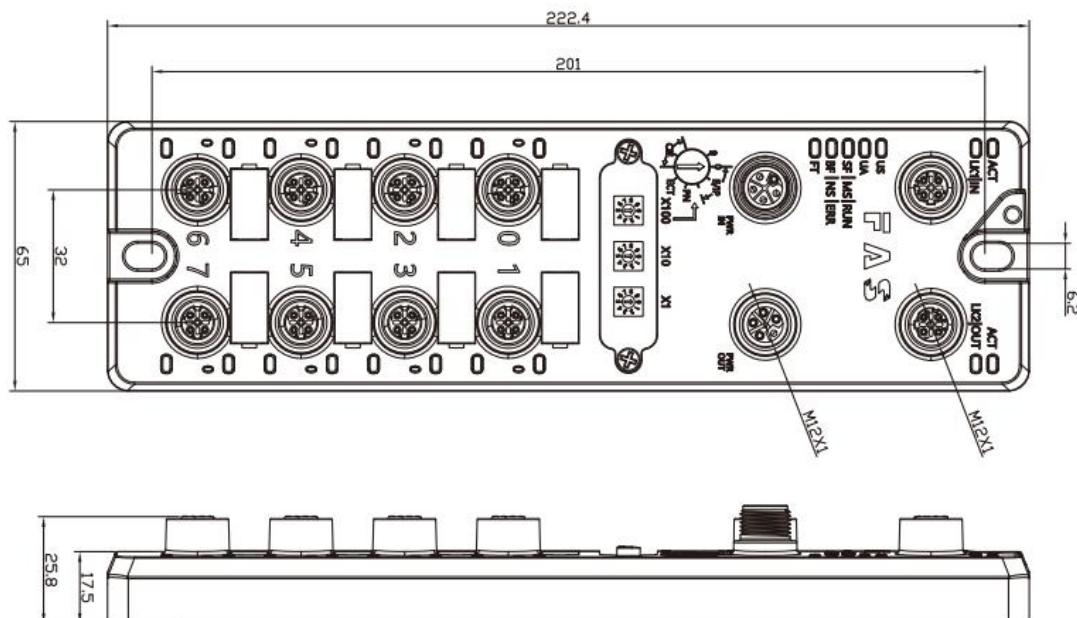

In independent power supply mode, the maximum current of each master station can reach 16A.

In the serial power supply wiring mode, if the rear module needs to be connected to the front module, the cumulative current must not exceed 16A.

2.Techincal data

2.1 Size

2.2 Mechanical data

Shell material	Die-cast aluminum housing, pearl nickel plated
Housing rating according to IEC 60529	IP67 Only in plug-in or plug type)
Power interface	L-Code (male and female)
Input port/output port	M12, A-Code (8*Female)
Size(W*H*D)	65mm*222mm*25.8mm
Installation type	2-Through hole mounting
Ground bus accessories	M4
Weight	About 670g

2.3 Operating conditions

Operating temperature	-5°C ~ 70°C
Storage temperature	-25°C ~ 70°C

2.4. Electrical data

Voltage	18~30V DC, conform to EN61131-2
Voltage fluctuation	<1%
Input current when power supply voltage is 24V	<130mA

2.5 Network port

Port	2 x 10Base-/100Base-Tx
Port connection	M12, D-Code
IEEE 802.3 compliant cable types	Shielded twisted pair, minimum STP CAT 5/STP CAT 5e
Data transfer rate	10/100Mbit/s
Maximum cable length	100m
Flow control	Half working condition/full working condition (IEEE 802.3-PAUSE)

2.6 Function indicator

PT	Green	EtherNet/IP communication protocol
	Yellow	ProfiNet communication protocol
	Blue	EtherCat communication protocol (reserved)
	White	CC-Link IE Field basic communication protocol

EtherNet/IP communication protocol module status

LE D	Show	Function
MS	Green light is always on	Working status: The equipment is running normally
	Green light flashes 1HZ	Standby: The device is not configured
	Flashing green, red and green alternately	Self-test: The device is undergoing a power-on self-test.
	Flashing red 1HZ	Recoverable faults:
	Red light always on	Unrecoverable failure
	Closure	US no input voltage
NS	Green light is always on	Connected
	Green light flashes 1HZ	Not connected
	Flashing green and red alternately	Self-test: The device is undergoing a power-on test.
	Red light flashes 1HZ	Connection timed out
	Red light always on	Duplicate IP
	Closure	USNo input voltage or no IP address

US	Green	Input voltage is normal
	Flashing red	Input voltage low (< 18 V)
UA	Green	Output voltage is normal
	Flashing red	Output voltage low (< 18 V)
	Red always on	No output voltage present (< 11 V)

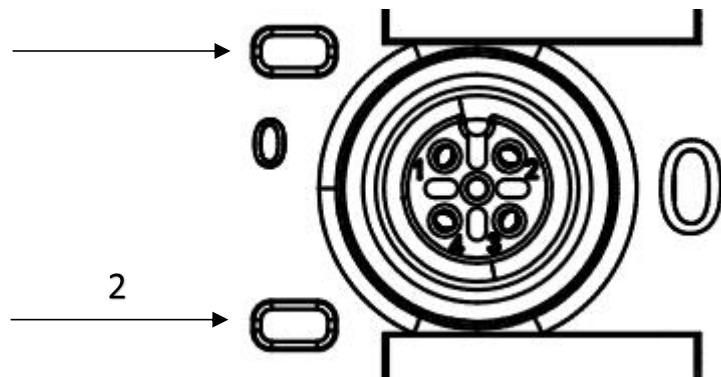

Profinet communication protocol module status

LED	Show	Function
SF	Closure	Working fine
	Flashing red 3s 1HZ	Bus start
	Red always on	System error
BF	Closure	Working fine
	Flashing red 2HZ	No data exchange
	Red always on	No configuration; or low speed physical link; or no physical link
US	Green	Input voltage is normal
	Flashing red	Input voltage low (< 18 V)
UA	Green	Output voltage is normal
	Flashing red	Output voltage low (< 18 V)
	Red always on	No output voltage present (< 11 V)

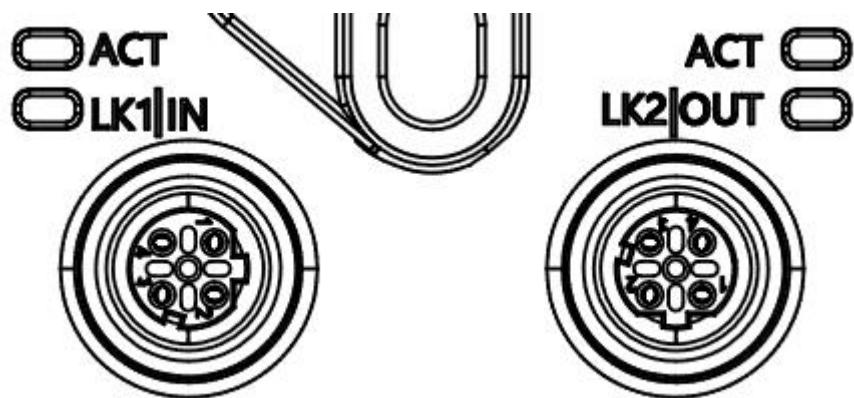

CC-Link IE Fileld Basic communication protocol module status

LED	Show	Function
RUN	Green light off	Module not connected
	Green light flashes 2.5HZ	Module has no communication
	Green light flashes 10HZ	Module not configured
	Steady green	Running: The device is running
	Closure	Module disconnected
ERR	Closure	Module disconnected
	Red light always on	Communication error
	Red light flashing	Watchdog timeout
US	Green	Input voltage is normal
	Flashing red	Input voltage low (< 18 V)
UA	Green	Output voltage is normal
	Flashing red	Output voltage low (< 18 V)
	Green light off	No output voltage present (< 11 V)

I/O port status

LED	State	Function
1	Closure	The status of Pin4 input is 0
1	Yellow	The status of Pin4 input is 1
1	Red	Port configured as input: Pin1 short circuit
1	Green	IOLink is connected
1	Flashing green	IOLink not connected
2	Closure	The status of Pin2 input or output is 0
2	Yellow	The status of Pin2 input or output is 1
2	Red	The UA power supply is cut off or the network is disconnected or Pin2 is short-circuited.
2	Flashing red	Pin1 short circuit

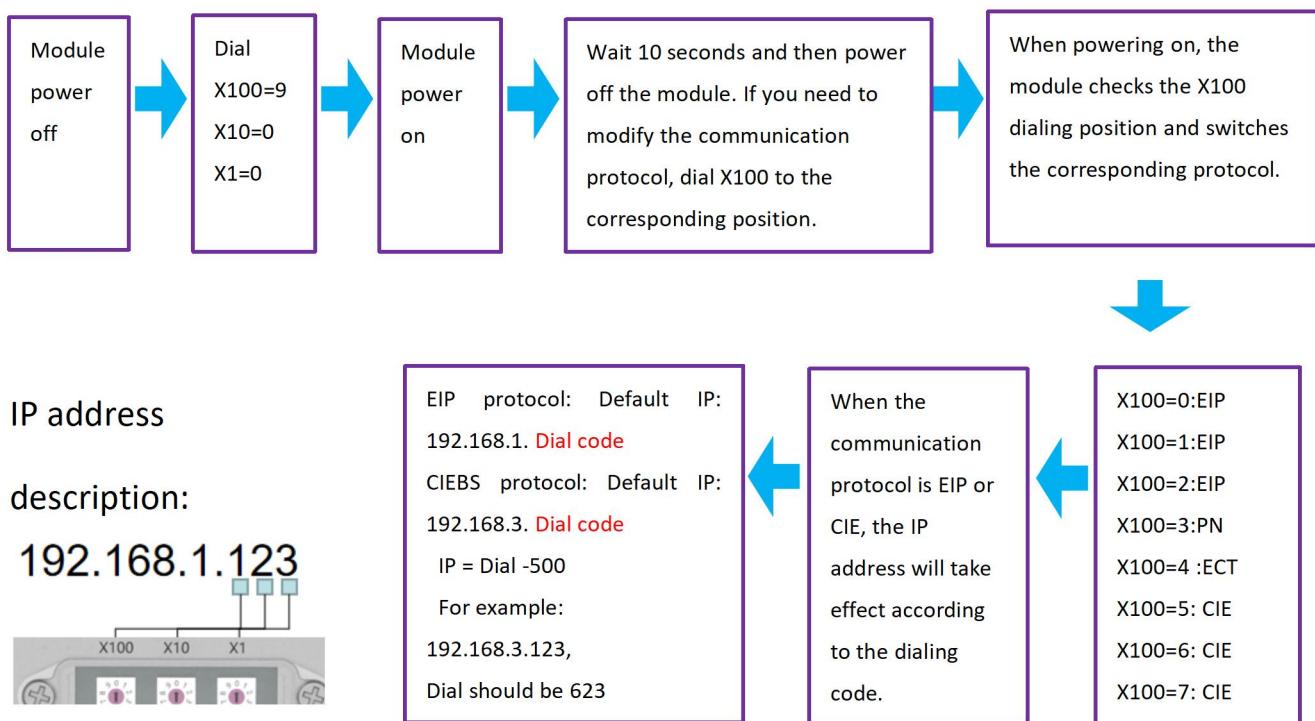

Network port status

LED	State	Function
ACT	Close Bus rate: 10Mbit/s	Bus rate: 10Mbit/s
	Yellow	Bus rate: 100Mbit/s
LK1 IN (ECT IN)	Flashing green	Data transfer in progress
LK2 IN (ECT OUT)	Flashing green	Data transfer in progress

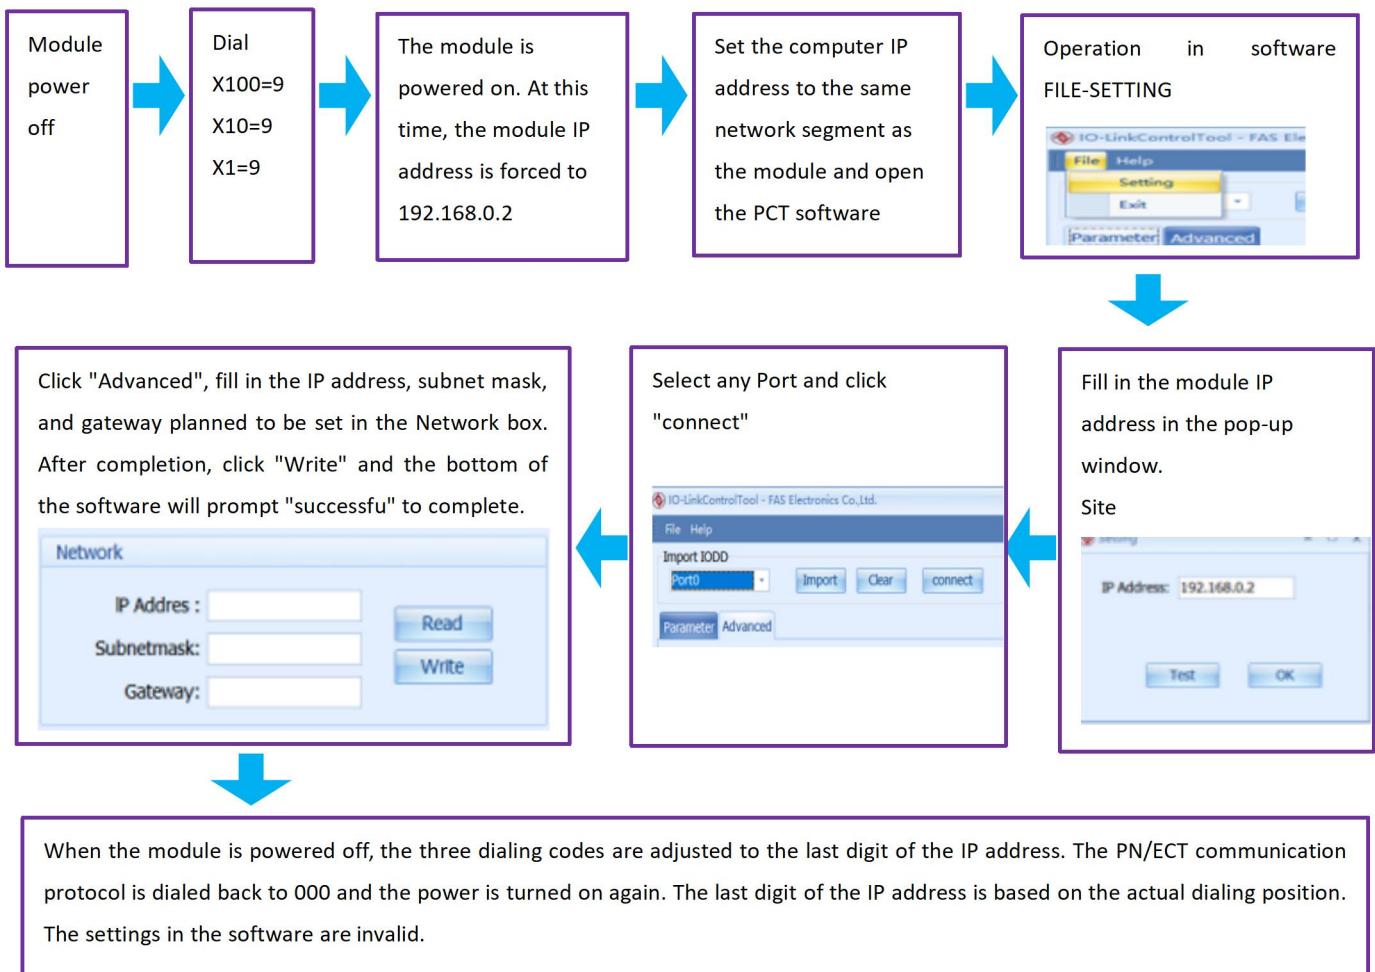

3. Integrated

3.1 Module configuration

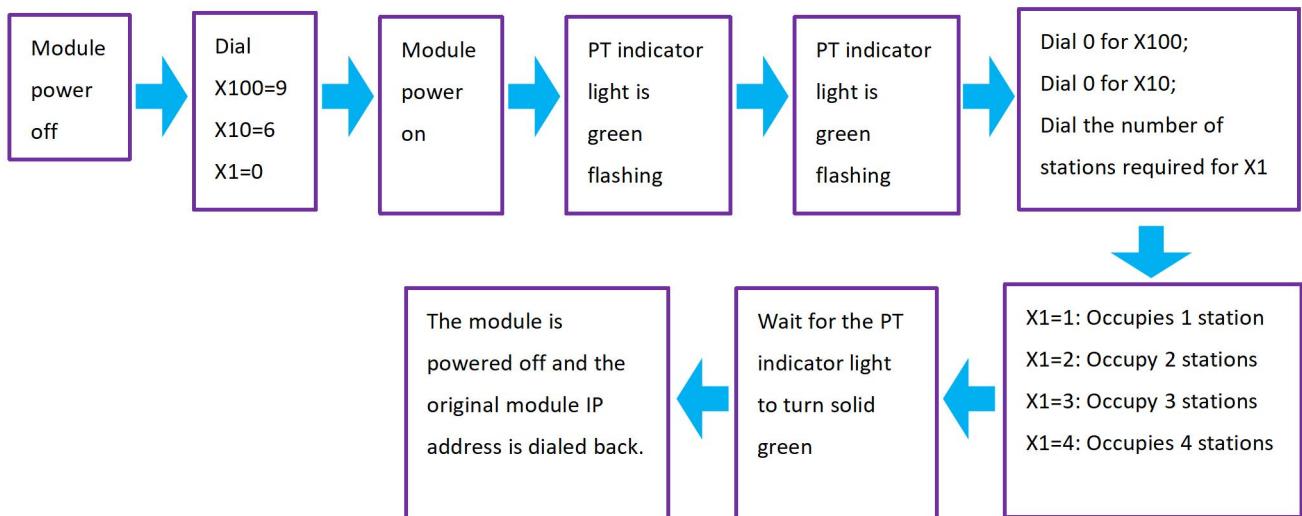

3.1.1 Restoring factory settings and switching communication protocols

3.1.2 Network segment modification (only applicable to EIP and CCIEBS communication protocols)

3.1.3 Setting the number of CCIEBS occupied stations

3.2 Data mapping

EIP communication protocol process output data

Byte	Port5 configuration*	(Same as above)							
Byte	Port6 configuration*	(Same as above)							
Byte	Port7 configuration*	(Same as above)							

Note:

When using Omron and Delta PLC, the configuration data is set in the module properties, and AB PLC is set in the mapping data.

Port configuration parameter description:

A. (1byte) IOlink CycleTime cycle time setting:

This parameter can be used for IO-Link communication speed. Using multipliers and time base calculations, the IO-Link cycle time can be increased.

The time base is described in the table below. The multiplier is entered in decimal form from 0...63.

Bit								Description
7	6	5	4	3	2	1	0	
Time base	Multiplier							<p>Bit 0 to 5: Multiplier These bits contain a 6-bit multiplier for the calculation of MasterCycleTime or MinCycleTime. Permissible values for the multiplier are 0 to 63.</p> <p>Bit 6 to 7: Time Base These bits specify the time base for the calculation of MasterCycleTime or WincycleTime.</p>

Possible values for MasterCycleTime and MiniCycleTime

Time base encoding	Time base value	Calculation	Cycle time
00	0.1ms	Multiplier x time base	0.4 ms to 6.3 m
01	0.4ms	6.d ms + multpler x time base	6.4 ms to 31.6 ms
10	1.6ms	32.0 ms + multiplier x time base	32.0 ms to 132.8 ms
11	Resarved	Resarved	Resarved

NOTE: The value 0.4 results from the minimum possible transmission time according to A.3.7

B. (1byte) Validation Type verification type setting:

(Value=0) No verification: Verification is disabled and every device will be accepted.

(Value = 1) Compatibility: Compare the manufacturer ID/device ID with the IO-Link device data.

(Value=2) Identity: Compares Manufacturer ID/Device ID/Serial Number with IO-Link device data. IO-Link communication only starts if there is a match.

C. (2bytes) Vendor ID1~ID2 manufacturer ID

D. (3bytes) Device ID1~ID3 device ID

E. (16bytes) Serial Number1~16 serial number

F. (1byte) Parameter Server parameter server (reserved)

	Port 6 process input data (32Byte)
	Port 7 process input data (32Byte)

Note:

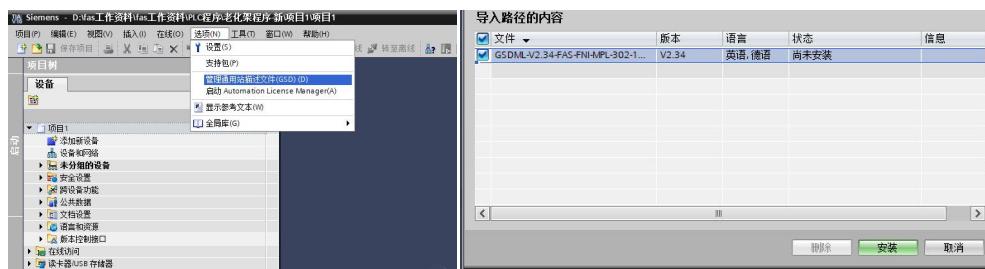

1. Please set the CCIEBS master port function in the FAS IOLink Tool software.
2. Points of 64 occupy 1 station, and the slave station connected to each port uses 4 words of points.
3. Points 128 occupy 2 stations, and the slave station connected to each port uses 8 words of points.
4. Points 192 occupy 3 stations, and the slave station connected to each port uses 12 words.
5. Points 256 occupy 4 stations, and the slave station connected to each port uses 16 words of points.
6. Refer to Chapter 5.1.3 for point setting. The CCIEBS master station occupies 4 stations by default.

3.3 PLC integration tutorial

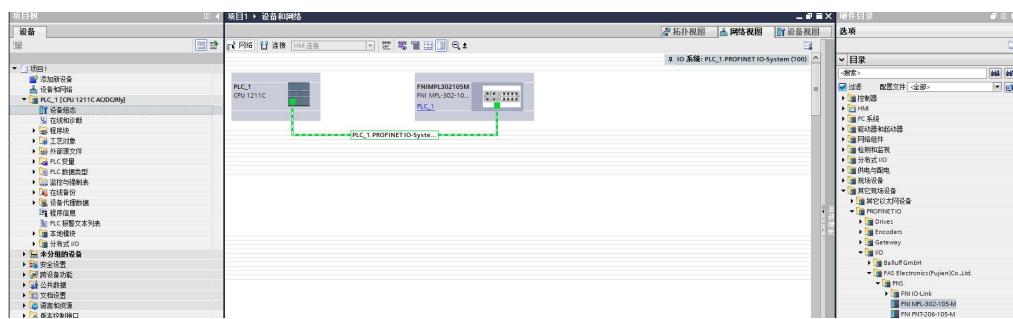

(The module communication protocol should be set before configuring the module, see 5.1.1 for details)

3.3.1 Siemens S7-1200 Boot Integration (PN)

1. Install GSD file

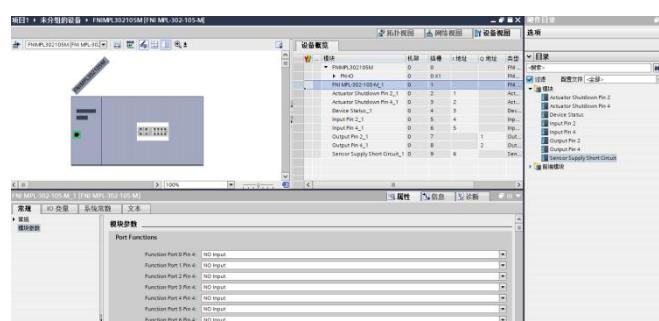

2. In PLC---Device Configuration---Network View---Hardware Catalog, select the module and drag it in, click "Unassigned", and select the PLC to be connected;

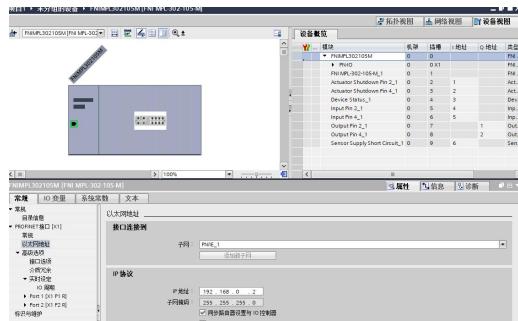

3. Double-click the module to enter the configuration.

- (1) Slot function configuration: Select the required data in the hardware catalog--Module and drag it into the slot in the device overview window;
- (2) Module port function configuration: Click the module icon, select "General", then click slot 1 to configure the port function

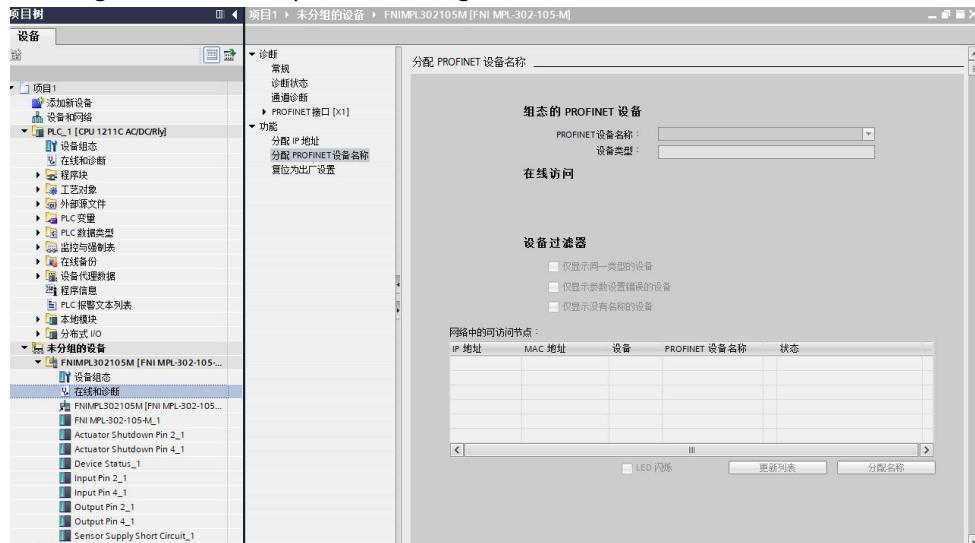

- (3) Module function configuration: Click the module icon, select "General", then click slot 0 to configure the module function

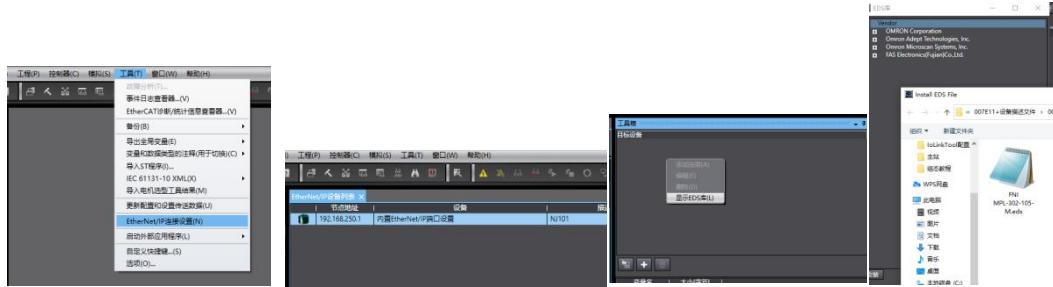

(4) After the configuration is completed, click Download in the configuration view.

3. Assign module PN name: PLC switches to online state, select "Ungrouped Device"---Click on the module name----Select Online and Diagnosis---Function----Assign PROFINET device name---Select the module to be assigned in the list (should be selected based on the physical MAC)---Click "Assign Name" to complete the configuration!

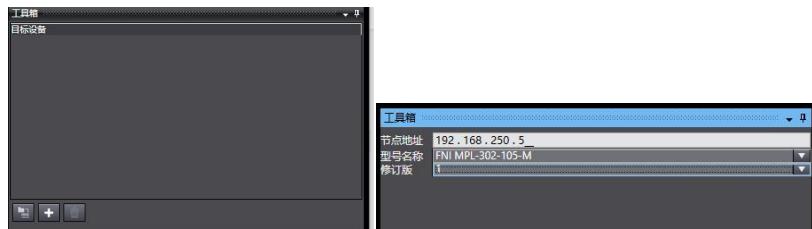

3.3.2 Omron NX1P2 Sysmac Studio Integrated (EIP)

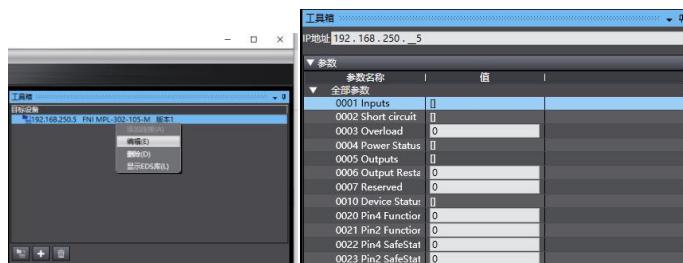

1. Install the EDS file: Tools---ETHERNET/IP Connection Settings---Double-click the PLC in the window---right-click the blank space in the toolbox on the right and select "Show EDS Library", click "Install" in the pop-up window, and select EDS File installation

2. Create a module: Click "+" in the toolbox window, fill in the module IP address, model name, and version, click "Add" below, and the module creation is completed;

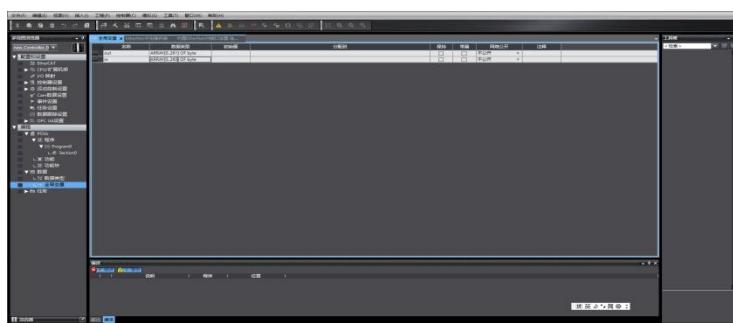

3. Configure the module: right-click the module - select "Edit" - configure the corresponding values in the parameters according to actual needs and click OK after completion.

4. Create variable association:

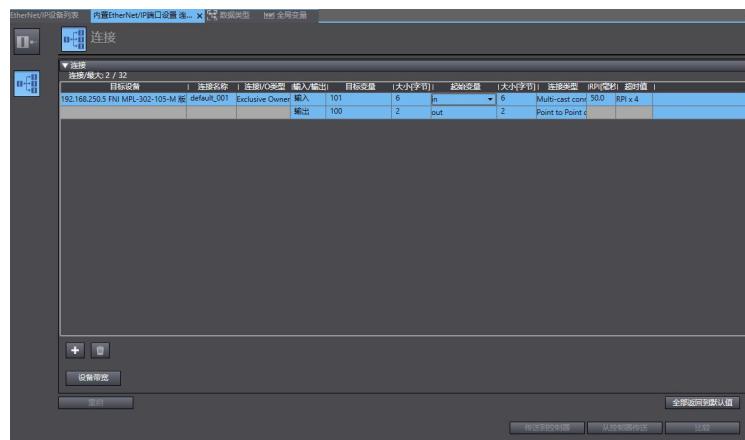

Programming--Data--Global variables create two arrays, output 262 bytes and input 266 bytes.
The corresponding input and output should be configured in the network exposure;

- (1) In the built-in ETHERNET/IP port setting window--select the first icon (label) on the left---click "Register All"

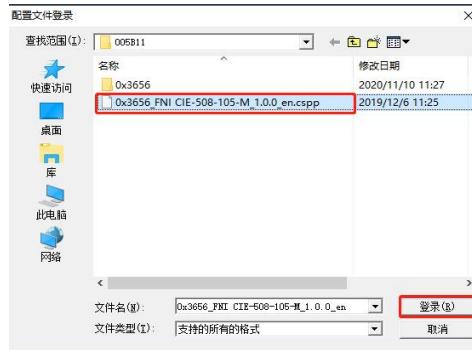

(2) In the built-in ETHERNET/IP port setting window--select the second icon on the left (connection)--click "+", select the previously configured module for the target device, select EXCLUSIVE Owner for the IO type, and select the corresponding For input and output, the target variable must be filled in 101,100; then select the corresponding starting variable and go online after completion. Select "Transfer to controller" and the configuration is complete!

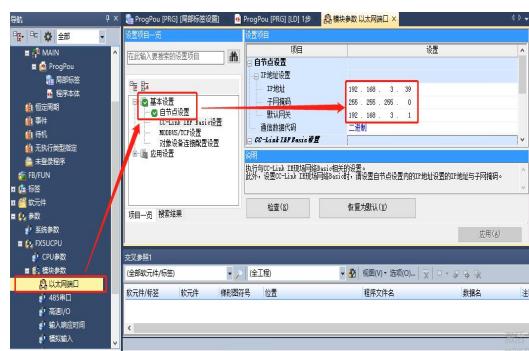

3.3.4 Mitsubishi FX5U Work2 Integrated (CIE)

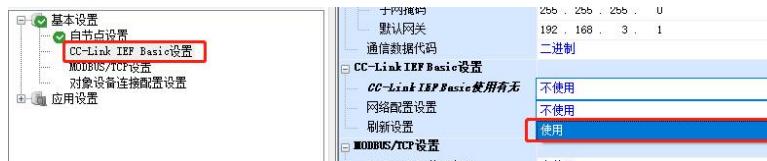

1. Install the CCSP file: First open GX WORKS 3-Tools-Configuration File Management-Login-CSPP file (the project must be closed to import the file)

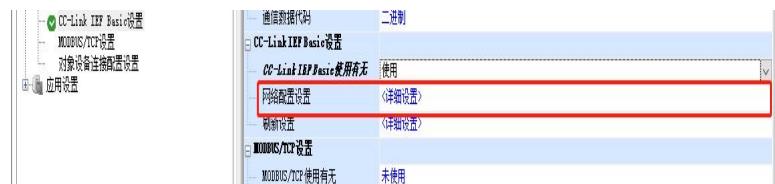

2. Click Project on the left - Parameters - FX5UCPU - Module parameters - Ethernet port, Basic settings - Self-node settings. Set own node IP

3. Click CC-Link IEF Basic Settings-select whether to use CC-Link IEF Basic-click Use

4. Click CC-Link IEF Basic settings-select network configuration settings-detailed settings;

5. Automatic detection of connected devices - occupies 4 stations, IP address is set using DIP switch - reflects the setting and closes

6. To refresh the target, select the specified device-software name M-assign the device address-application, and the configuration is completed!

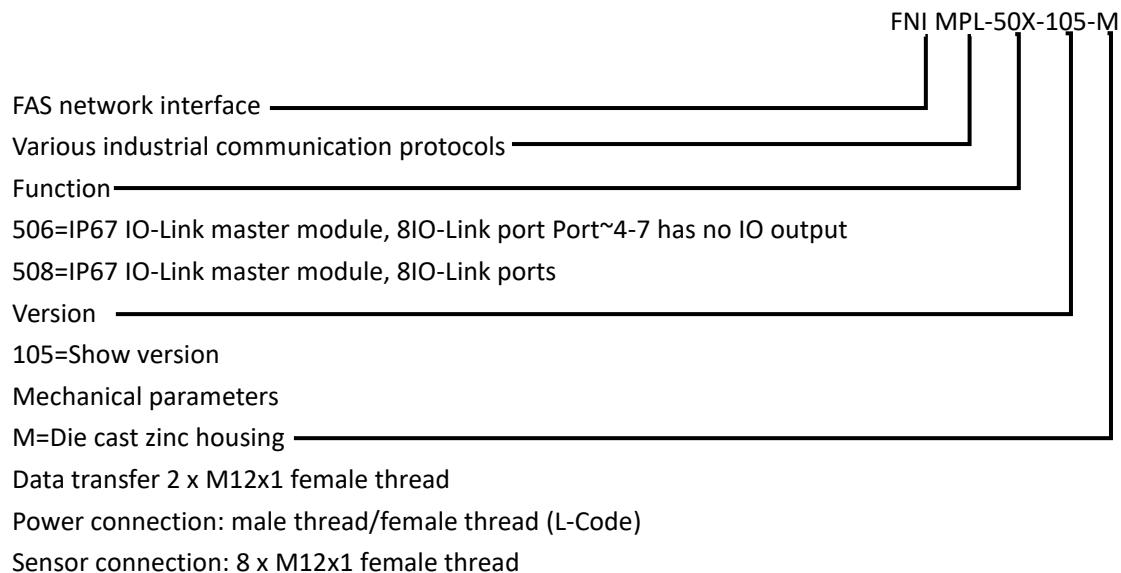

4.Appendix

4.1 Materials included

- FNI MPL contains the following parts
- I/O-Block
- 4 blind plugs M12
- Ground bus
- Thread M4x6
- 20 tags
